

Software engineering project weekly report 2

Fahad Khalid

December 2017

1 Introduction

In the previous weeks our main focus was understanding the codes and reports. This week Basel and myself worked on the 3D-korn project. First of all we got the project to work and managed to connect the Kinect sensor. We faced some issues in the accusation of a 3D scan. It seemed a matter of calibration. Once we got used to the GUI more our 3D scan results improved. Furthermore, we studied how the GUI could be improved. Apart from this we concluded the functions in the 3D-korn project were well structured but some improvements could be added.

Regarding the GUI I have started my study on GUI in order to develop some good GUI editing to the the project at hand.

2 Conclusion
